EDUCATION

Vellore Institute of Technology | Vellore
B.Tech in Computer Science Engineering (Core)

2023 – 2027
GPA: 8.38/10.00

RELEVANT COURSES

Data Structures and Algorithms | Web Programming | Computer Network | Structured and Object-Oriented Programming | Computer Architecture and Organization | DBMS | OS | Cloud Architecture | ML Specialization

INTERNSHIPS

Software Engineer Intern | KreditBee

May 2026 -Present

- Building scalable full-stack applications and backend services for real-world fintech products.
- Developing and optimizing APIs, databases, and cloud-based workflows for high-performance systems.
- Collaborating with engineering teams on production-level development, debugging, testing, and deployment.

Project Manager | Computer Vision and ML Intern | MarkMyAd

Feb 2026 -May 2026

- Spearheaded scalable, real-time AI video analytics solutions using deep learning, transforming complex business requirements into high-performance, production-grade systems.
- Architected multi-object tracking pipelines (YOLO, DeepSORT) and led cross-functional teams to deliver high-performance, production-ready AI systems.

Full Stack Development Intern | Valsco (Jurident)

Dec 2025 – Feb 2026

- Built scalable full-stack features with React, Node.js, FastAPI, and Firebase for high-performance applications.
- Developed and optimized RESTful APIs and database queries, ensuring low latency and efficient data flow.

Software Development Intern | Bluestock Fintech

June 2025 – July 2025

- Built a full-stack IPO web app using React.js, Node.js, and PostgreSQL with responsive UI and REST APIs.
- Optimized PostgreSQL schema and managed Git version control for streamlined development and deployment.

HACKATHONS

- **Smart India Hackathon | 2024** : Built an AI-based women's safety system using ML & computer vision.
- **National Space Hackathon – IIT Delhi** : Developed AI for space debris collision prediction & avoidance
- **Code for Bharat – Season 2** : Built an AI-powered missing person detection system using CCTV networks.

PROJECTS

ML-Based Fruit Quality Evaluation | Tech Stack: Python, ML, Computer Vision

Dec 2025

- Built a computer vision-based system to classify fruit quality, improving inspection accuracy using ML models.

Real-Time Vehicle Detection | Tech Stack: Python, OpenCV, YOLO

Aug 2025

- Developed a real-time vehicle detection system using YOLO, enabling accurate tracking from live video streams.

Shoporia – E-Commerce Website | Tech Stack: MERN stack

Mar 2025

- Built a full-stack shopping platform supporting browsing, live tracking, orders, payments, and authentication.

Food Ordering Platform | Tech Stack: MERN Stack

Feb 2025

- Implemented a full-stack food ordering platform with payment integration, live tracking, and authentication.

Resume & Cover Letter Builder | Tech Stack: OpenAI GPT, LangChain, Serverless

Oct 2024

- Built an AI-powered resume & cover letter builder with React, Python, databases, and PDF/DOCX export

TECHNICAL SKILLS

- **Frontend and Backend:** Next.js + Tailwind, HTML, CSS, JavaScript, React, Node.js, Express.js
- **Languages and Tools:** Python, Java, C++, C, MongoDB, PostgreSQL, MySQL, APIs, GitHub, Vercel, Render
- **Machine Learning & Data Science:** Computer Vision, Scikit-Learn, NumPy, TensorFlow, OpenCV, YOLO, Matplotlib, Jupyter Notebook, Pandas
